Next Generation Platform Evaluation Program

ObjectRocket is on a mission to provide open source data solutions and our unparalleled expertise on the industry's best cloud database platform. We're thrilled to be opening up our next generation platform, built on Kubernetes, to a select group of Alpha participants.

As an participant, you'll get free database resources on AWS in the region of your choice. Your experience and feedback during the program will play a critical role in helping us build the database platform you need and ultimately influence the future direction of our new platform on all major clouds.

Benefits

- Free database technology resources on AWS during the Alpha timeframe. (You may continue to use the platform after the Alpha testing is complete.)

- Provide feedback and influence the future direction of the our platform and offerings. Be as selfish as possible here and tell us exactly what you're looking for.

Is the Next Generation Platform Evaluation Program Right for my Business?

Alpha programs aren't right for every workload. Here are some things to keep in mind to have the best experience possible:

- This is not a good program if you are a first time user of MongoDB, Redis, or Elasticsearch.

- We will not allow production workloads. Do you have a test, development, or QA workload that you're actively using?

- Are you willing to provide regular feedback on your experience and capabilities of the platform? The more you put into communicating and providing your valuable feedback, the better everyone's experience will be.

DATABASE OPTIONS

We are offering three database types to participants of our Alpha program. You can choose one or any combination of the following:

MongoDB on AWS:

- Highly Available replica set
- WiredTiger storage engine
- MongoDB version 3.4 and higher with automatic failover

Elasticsearch on AWS:

- Highly Available 3 node Elasticsearch cluster
- Includes Kibana, Cerebro, and other plugins
- Elasticsearch version 6.2 and higher

Redis on AWS:

- Highly Available Redis cluster
- Redis version 4.0 with automatic failover

ObjectRocket

Program Details

ObjectRocket's early access terms of service apply to this Next Generation Platform Evaluation Program. Please see the early access terms of service.

Maintenance

Access to the platform may be intermittent. There will be times where you will not be able to access data due to maintenance and enhancements to the platform.

Backups & Logs

Backups will not occur regularly. Logs and metrics will be available upon request. Direct access to backups, logs and metrics will be added in the near future.

Support

All Cloud Database Alpha test participants will have a **dedicated Slack channel** to communicate with ObjectRocket engineers about their instances.

All provisioning and configuration requests should be emailed to alphatest@objectrocket.com.

There are no set SLAs for uptime or response time.

Getting Started

Here's what happens next:

1. Fill out the application form.

2. If you're a good fit for the program, we'll contact you about next steps. If you're not a good fit, we'll include you in updates letting you know when you can join our Beta. (You'll get first dibs.)

3. We'll schedule a kick off call with selected participants to discuss details and any questions you have.

4. We'll help you get data on the new platform.

Accepted applicants will receive free AWS database services.
